

Xiaotian Jin

@ xiaotian.jin@kaust.edu.sa  github.com/mugglejinx
 PhD in Statistics  King Abdullah University of Science and Technology  Saudi Arabia

Ph.D. candidate in Statistics at KAUST with research interests in statistical modeling, Bayesian inference, causal inference, and machine learning. Experienced in numerical optimization (MCMC, SGD) and scientific computing, with hands-on software engineering in Python, R, and C++. Interned at CAMEL-AI (AI Agent startup) focusing on tool calling, MCP, and multi-agent systems.

Education

2022.01–Now	King Abdullah University of Science and Technology (KAUST) Ph.D. student in Statistics <i>Advisor: David Bolin</i>
2020.09– 2021.12	King Abdullah University of Science and Technology (KAUST) Master in Statistics <i>Advisor: David Bolin</i>
2016.09– 2020.06	Wenzhou-Kean University Bachelor in Computer Science, minor in Mathematics <i>Advisor: Tiffany Ya Tang</i>

Core Skills

- › **Statistics & Data Science:** Bayesian/Causal Inference, Hierarchical Modeling, Numerical Optimization (MCMC, SGD), Finite Elements.
- › **AI & Machine Learning:** Large Language Models (LLMs), AI Agents & Multi-Agent Systems, RAG, PyTorch, Scikit-learn.
- › **Engineering & DevOps:** Python, R, C++, Java, JS, OOP, Docker, CI/CD (GitHub Actions), Git, Linux/Bash.

Professional Experience

2025.11 2024.12	Internship at CAMEL-AI (camel-ai/camel) › Multi-Agent System Architecture (ChatAgent, Workforce) – Contributed to the CAMEL multi-agent framework, including the core modules like ChatAgent, and Workforce. – Ranked as a Top 5% Contributor (58+ commits) to the CAMEL-AI repository; maintained code quality and reviewed community PRs. › Core Module Development (MCP integration) – Designed and integrated the core Model Context Protocol (MCP) module, enabling AI agents to seamlessly function as clients/servers. › Open-Source Project – MCPify (https://github.com/camel-ai/mcpify) – Developed an open-source tool to expose existing APIs as MCP servers, significantly enhancing tool interoperability for the agentic ecosystem. › Research & Open-Source Leadership – Spearheaded research on workflow memory utilization for autonomous agents in CLI environments to improve self-correction and context retention.
Present 2021	Developer of Open-Source R package – ngme2 (https://github.com/davidbolin/ngme2) › An R package for statistical modeling using non-Gaussian processes. › User-friendly R interface design. › Backend optimization implementation using C++ and different linear algebra libraries.

Publications

- › E. Awadelkarim, D. Bolin, X. Jin, A. Simas, and J. Wallin, “Geometric ergodicity for Gibbs sampler in linear latent models with GIG variance mixtures.”
- › D. Bolin, X. Jin, A. B. Simas, and J. Wallin, “A Unified and Computationally Efficient Non-Gaussian Statistical Modeling Framework.”

Awards

- › KAUST Dean’s List Award — 2023, 2024
- › The Government’s Scholarship of Province Zhejiang (2017–2018)
- › The First-Class Scholarship of Computer Science Department (2016–2017)
